LedgerPilot

Procurement reconciliation

with evidence for every decision

Purchase orders, receipts and invoices enter one review workflow.
The reviewer controls the final export.

Challenge 2 / Powering the Future of Work

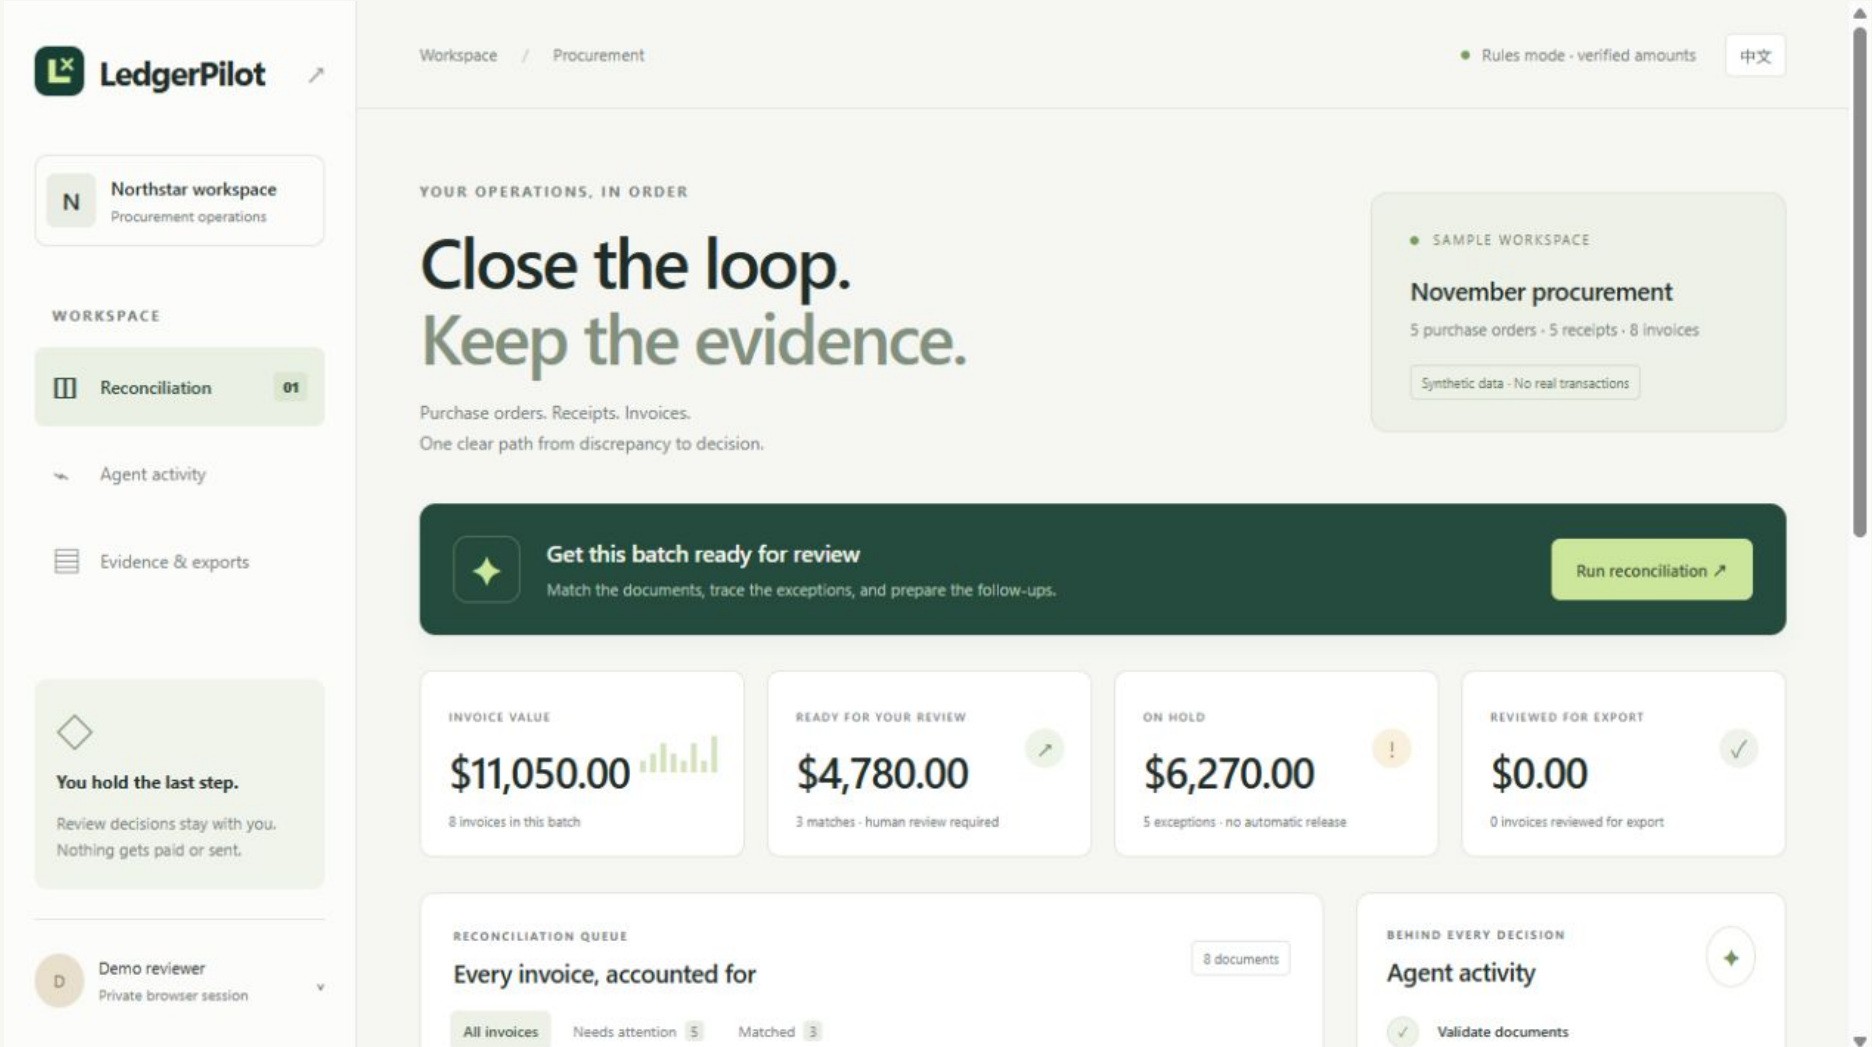

The procurement review problem

An invoice can look correct while its receipt is incomplete.
A convincing explanation does not establish that goods arrived.

The reviewer needs the underlying comparison

LedgerPilot checks the ordered quantity and price against received goods and the invoice. Exceptions retain source references, so a reviewer can inspect the reason before deciding.

A working review queue

Actual local run

Rules mode

Synthetic data

The sample result is reproducible

All records are synthetic. These are invoice face values, not savings.

Total invoice value	8 invoices	**$11,050**
Ready for review	3 invoices	**$4,780**
Held for clarification	5 invoices	**$6,270**

Example: INV-1002 bills 100 units, while receipt GR-402 records 80. The invoice stays on hold until its source evidence is corrected.

Vultr operates the intended backend

Browser review interface

Same-origin requests to the application backend

Vultr VM: validation, matching and review state

Node.js backend, persistent session files, HTTPS proxy and Docker configuration

Optional Vultr Serverless Inference

Explanations and email drafts use verified findings. The model cannot modify amounts or approve invoices. Cloud deployment remains pending.

The boundary around each decision

Held invoices cannot enter the CSV export.
Clean matches require an explicit review action.
An additional confirmation precedes the download.

Supplier drafts remain unsent. No payment adapter exists. The evidence packet has a checkable hash chain, but it is not independently notarized. AI explanations remain advisory.

A focused business hypothesis

Initial audience

Small procurement teams working from structured document exports.

Proposed validation

Compare manual and assisted review on the same batches: review time, exception false positives and evidence usefulness. Customer demand and pricing remain unvalidated.

Preparation began 2 November 2026, before the advertised build window. Disclose the history and confirm eligibility before entering.
